

Become a Green Leader

You'll be an environmental leader when you partner with Unitil for your new public electric vehicle ("EV") charging station.

WHY

Unitil is part of a statewide effort to accelerate the widespread adoption of EV charger infrastructure. This program, which is approved by the Massachusetts Department of Public Utilities, will increase the availability of charging stations by lowering the investment barrier for installing the infrastructure required for the ownership of EV chargers. We also will help prepare for the further integration of EVs throughout the electric distribution system. Robust charging infrastructure alleviates range anxiety for EV customers and helps facilitate an economic and environmentally sound transition to EVs throughout the Commonwealth.

We can help you Save Money

Show your support for a green-energy future by becoming a visible leader in the community and save money while doing it! During this limited time Program, we are offering funding for the installation of required electrical infrastructure for your new public EV charging station.

60%
Increase in global electric vehicle sales in 2022

1 in 7
Cars purchased globally in 2022 was an electric vehicle

756,534
New US electric vehicle registrations in 2022

HOW

IT WORKS

1 Program Overview

Unitil will outline the EV Charger Program including our investment in charging infrastructure. Please read the FAQs, customer checklist, terms and conditions, and the application. Customer sites must be open to the public. An application must be submitted for a determination if your project idea can be funded.

2 Site Assessment

You and your vendor (electrician) will perform a site assessment, including the location and number of EV chargers, selecting them from Unitil's qualified manufacturers list at: unitil.com/Ready2Charge-program/charger-list.

Everyone Benefits

Unitil will cover a portion of the electrical infrastructure costs for your approved project. We offer support to help you through the Application and Installation process. In order to get started, visit unitil.com/ev-application to download an application and more information about the program.

3 Installation

For approved projects, the electrical infrastructure will be funded by Unitil up to **\$77,000** for Level 2 EV sites and up to **\$143,000** for the DCFC EV site. The EV chargers will be owned by you, and installed by a MA licensed electrician.

4 Customer Support

You will be responsible for the ongoing maintenance of the EV chargers, customer support for EV drivers, cost of networking, cost of a billing system and electricity costs. Unitil maintains a list of electrical contractors and developers, however, you can choose any organization that utilizes a MA licensed electrician to install the EV chargers and other necessary electrical equipment.

- ✓ Attract new customers
- ✓ Retain employees
- ✓ Make your property more desirable
