

AN IMPORTANT MESSAGE FOR NATURAL GAS CUSTOMERS

While Unitol is responsible for gas lines up to and including the meter, customers are responsible for the maintenance of all natural gas lines extending from the meter to and within their homes or businesses. This includes buried gas lines as well as lines above ground that run from the meter to the homes or businesses.

Our natural gas system is governed by Federal regulations, which recommend that customers with natural gas lines buried from the meter to the primary structure should be:

1. Periodically inspected for leaks;
2. Periodically inspected for corrosion if the piping is metallic; and
3. Repaired if any unsafe condition is discovered.

If natural gas lines are not properly maintained, they may be subject to potential hazards of corrosion and leakage. While the DOT regulations do not require that you inspect or maintain your natural gas service line, Unitol along with the DOT, recommend that you periodically inspect them for corrosion and leaks.
