Net Metering Rate for Customers' Renewable Generation

A special billing option is available to any customer with a power generator that produces electricity using a renewable energy source such as biomass, solar, wind, or water, and that has a capacity of 1,000 kilowatts or less. Depending on the size of your generator and when an application for interconnection was completed, different rules apply as to how your electricity consumption is metered, measured and billed pursuant to the New Hampshire Public Utilities Commission Net Metering rules.

The purpose of this program is to encourage the innovation and growth of renewable energy. Renewable energy is energy produced from biomass, the sun, wind, or water. For more information on how you can participate in Net Metering, please visit us at our website:
